

PowerServer PACS for Acute Care Facilities

Go Digital.

Harmonizing patient information, workflow and images is one of the biggest challenges acute care facilities face in today's fast paced health-care environment. We realize that off-the-shelf imaging management solutions don't address unique departmental needs – that is why we work closely with our clients to create custom Hospital solutions that specially cater to their needs. Based on the open PowerServer web-based image management platform, our solution can be tightly integrated into your EMR and supporting infrastructure to eliminate the logistical head-aches common to complex facilities and facilitating collaboration across your entire enterprise.

How it benefits your...

Acute Care Facility

- Enterprise-wide access to images
- Tight EMR integration
- Better patient care
- Instant communication and collaboration
- Quality customer service and support

Radiology Department

- Radiology specific automated workflow
- Web-based radiology workstation
- Full paper-less environment
- Built-in voice recognition

IT Department

- Off-the-shelf hardware
- Security and HIPAA compliance
- Open Standards
- Simple web-based management
- Automatic workstation configuration

The PowerServer platform gives you...

Tight Integration

Our tight integration with a large number of 3rd party solutions means that the EMR you are using is probably already integrated into PowerServer and its radiology workflow. All our integrations are done through provided APIs and open-standards, so thanks to our extensible architecture, we can easily accommodate any needs that your facility may have.

Instant Communication and Collaboration

Our unified communication client helps staff be more productive by enabling them to communicate easily with others in different locations using a range of communication options, including instant messaging (IM), voice, and video.
