

PowerServer PACS for Ambulatory Care Facilities

Go Digital.

Recent government cutbacks in exam reimbursement rates have pushed many ambulatory care facilities into optimizing their underlying infrastructure and re-evaluating the way they go about doing business. Many plan to outsource non-critical labor to maximize profits and automate costly workflow processes.

The PowerServer PACS is the easiest way to make the most out of the recently reduced exam reimbursement rates. You can use PowerServer to augment your current infrastructure by replacing inefficient workflow steps; or go fully digital. The choice is up to you because our PACS scales to anything you need it to.

The PowerServer platform gives you...

Freedom to grow

PowerServer PACS scales to support groups of any size and configuration, ranging from the smallest ambulatory care facilities to the largest multisite global enterprises. Couple that with our non-restrictive and flexible unlimited workstation licensing model and you have a solution that facilitates your business growth.

No more repetitive tasks

Accomplish all of your time-consuming and repetitive manual tasks effortlessly with our Unified Radiology Workflow. It's easy to create custom Workflows simply by pointing, clicking and dragging items. Important tasks that once had to be manually performed a hundred times a day "just happen".

The virtual ambulatory care facility

Web-enabled does not mean web-based. PowerServer PACS was built from the ground up to deliver images, clients, updates, reports and dictations to facilities dispersed geographically. We realize that your staff isn't always going to be located in one place, that is why we have worked hard to make the concept of a virtual facility a reality.

With the PowerServer PACS, you will be able to connect an unlimited number of physical sites across any distance; opening the door to countless new outsourcing and diversification possibilities.

PowerServer scalability works for everyone...

-  Individual Imaging Centers
-  Small Imaging Center Groups
-  National Imaging Chains
-  Teleradiology Practices
-  Nighthawk Services
-  Mobile Services
