

Operating as a Mammography Center?

Common problems in mammography departments...and how RamSoft solves them

Mammography is deeply personal — patients are anxious, vulnerable, and expect empathy.

Yet practices must maintain a high daily volume to remain financially viable. This tension can overwhelm staff and diminish the patient experience.

Too many forms and manual data entry.

Patient intake forms, technologist worksheets, and radiologist data sheets are often filled out separately—on paper or across disconnected systems—leading to delays, duplication, and errors.

Disconnected systems and vendor overload.

When tracking, reporting, portals, and scheduling come from different vendors, you're left juggling costly, fragile systems that disrupt workflows and drain support resources.

RamSoft eases the pressure by streamlining scheduling, forms, QC, reporting, and follow-up — helping teams work efficiently without sacrificing empathy.

Stana™ systematizes lay letters and recall tracking, ensuring patients feel supported beyond the exam room.

Blume® enhances patient engagement with personalized reminders, digital forms, and secure access to results — reinforcing trust and increasing long-term retention.

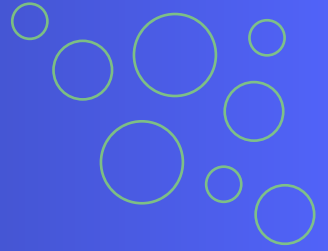

In **PowerServer®**, all forms are stored in the Study Documents tab, making them readily accessible during reporting — improving accuracy, consistency, and efficiency.

Stana™ unifies all forms into a single digital workflow, ensuring seamless data capture across roles while reducing redundancy and mistakes.

Stana™ and Blume® are fully embedded within PowerServer™, eliminating reliance on fragile third-party integrations and providing a seamless, all-in-one experience for staff and patients.

Experience extensive benefits for mammography centers and more with PowerServer®, Stana™, and Blume.

BI-RADS® and breast density fields are missed, or inconsistent.

Lack of structure leads to incomplete documentation and delays.

- Stana™ enforces BI-RADS-structured inputs and links them directly to the patient record and report.

Missed follow-ups and tracking failures.

Patients don't return for diagnostic follow-up or annual/biennial screening, slipping through the cracks.

- Stana™ helps ensure tracking, reminders, lay letters and recalls for BI-RADS 0 scores are organized.

Preparing for MQSA audits is stressful and manual.

Collecting data and outcome logs for regulatory compliance is time-consuming.

- Stana™ maintains MQSA-required data automatically and enables audit readiness with minimal effort.

High no-show rates and low patient retention.

Missed appointments and poor recall follow-up hurt both care continuity and revenue.

- Blume® helps patients see their appointment, receive automated reminders, and view reports — increasing satisfaction and return visits.
- Stana™ simplifies patient reminders, ensuring timely return visits.

Duplicate data entry and tracking errors.

Manually entering data across systems leads to mistakes and wasted time.

- RamSoft's single platform architecture eliminates duplication and ensures data consistency across RIS, PACS, Blume, and Stana™.

No support for breast laterality or NMD participation.

Sites struggle to meet registry requirements or submit structured data.

- Stana™ supports breast laterality tracking and NMD-compliant data formats.

Slow reading experience for tomosynthesis and mammograms.

Large datasets and poor tools slow radiologists down.

- PowerServer®'s viewer supports DBT, CAD overlays, synchronized left/right views, and multistage hanging protocols, accelerating reads and improving diagnostic quality.
- Stana™ integrates outcome data into a unified reporting flow.

Faster Reads. Smarter Workflows.

PowerServer® puts mammo reading in a single-click cycle. Quickly scroll through 2, 3, or 4 years of prior mammograms and switch protocols instantly—no delays, no distractions. Faster, smarter viewing means more focus where it matters: the diagnosis.

How RamSoft solves your pain points

RamSoft cloud-based and cloud-native – including patient portal – solutions incorporate innovative technology to streamline workflows and mobilize accelerated diagnostic imaging of modern mammography:

➤ Integrated Breast Imaging Platform

RamSoft delivers RIS, PACS, mammo tracking, patient engagement, and reporting—all in one seamless platform. No vendors to juggle. No patchwork to manage. Just imaging, accelerated.

➤ Smart, Role-Based Clinical Forms

Customizable forms for patients, technologists, and radiologists are built into the workflow. Forms are digitized and stored with the study in PowerServer™, ensuring everyone works from the same record — no duplication, no missed details.

➤ Patient Engagement that Drives Retention

Blume® helps you create a modern patient experience with self-scheduling, automated reminders, digital forms, and secure access to results. Patients feel informed, empowered, and more likely to return for follow-up care.

➤ Automated Workflows That Save Time

RamSoft automates repetitive tasks — from reminder letters and patient notifications to study routing and report distribution. This reduces staff burden, improves consistency, and ensures nothing slips through the cracks.

➤ Built-In Mammography Tracking with Stana™

Stana™ handles BI-RADS®, breast density, recalls, lay letters, and MQSA tracking—optimizing follow-ups and ensuring compliance without added software.

➤ Advanced Mammography Viewing Tools

PowerServer®'s viewer is optimized for breast imaging, with DBT support, CAD overlays, smart hanging protocols, and left/right sync. Radiologists can interpret efficiently and confidently, even with large tomo datasets.

➤ Audit-Ready Compliance Framework

Stana™ captures and stores all data needed for MQSA audits, including outcome tracking, follow-up recommendations, and breast laterality. Audit trails, role-based access, and digital documentation help you stay compliant with less effort.

➤ Scalable for High-Volume Practices

Whether you see 10 or 100 patients a day, RamSoft supports efficient, high-throughput operations without sacrificing care quality. Built-in tools like Stana™ and Blume® adapt to your workflow, helping your team stay focused on care — not admin.
