

Overseeing a Teleradiology Group?

RamSoft knows your pain

In providing teleradiology services there are specific features you need and want from the radiology software you use every day, namely:

Efficient and seamless management of a group of geographically dispersed radiologists and their daily worklists.

Rock-solid reliable and stable software that lets you manage the workflow of multiple remote locations and radiologists reading numerous images every day.

Flexible solutions that will easily connect and integrate with your company's existing hardware, software, and workflows.

Affordable software that can be integrated into your existing ecosystem without a gigantic capital expense.

[PowerServer®](#), [OmegaAI®](#), and [Blume®](#).

How RamSoft solves your pain points

Construct an optimized workflow specific to your practice with RamSoft's cloud-based and cloud-native radiology solutions used by many leading teleradiology companies thanks to:

▶ Automated Workflows

Radiologists, technologists, and PACS Admins can easily and intuitively build automated workflows that can triage and prioritize readings and reports, enabling dynamic collaboration and ultimately, timely patient care delivery. Advance workflow automation further with RamSoft's integrated AI partner solutions (available in both PowerServer® and OmegaAI®).

▶ Limitless Flexibility

RamSoft's modular software can be adapted to your company's unique needs and effortlessly implemented. Our RIS/PACS/VNA and patient portal solutions are configurable specifically for your workflow and scalable to grow with your practice.

▶ Incomparable Reliability

The robust performance and dependability RamSoft's software offers is what today's teleradiology companies can rely on. (One teleradiology group used RamSoft's Gateway™ DICOM® Router to restore imaging routing within hours after a natural disaster!)

▶ Chats/Screen-Share/Alerts

Endeavor responsive communication and collaboration with automated alerts (based on critical findings or study statuses), group chats (for radiologists, technologists, and support staff), or screen sharing (allows radiologists to easily discuss and share images with technicians or other physicians. **These collaboration features are included with OmegaAI®.**

▶ Hassle-Free Integration

Easily integrate any existing new and legacy systems employing the flexibility of cloud-based (PowerServer®) and cloud-native (OmegaAI®) product design. Integration is one of the areas we lead the industry!

▶ Cost-Effective Pricing

RamSoft's per study pricing model makes it possible to purchase and implement cloud-based or cloud-native radiology SaaS solutions without breaking the bank. For companies that employ large teams of radiologists operating at multiple locations with multiple modalities, we do not charge extra for adding new users, physicians, facilities, or multiple modalities!

DICOM® is the registered trademark of the National Electrical Manufacturers Association for its Standards publications relating to digital communications of medical information.
